

Trackless Tram system

Ayman Kurdi

Basil Hashim

Faisal ALkharboush

Outline

- ▶ Introduction
- ▶ Problem statement
- ▶ Decision making:
 - ▶ Communication
 - ▶ Propulsion
 - ▶ Steppers
- ▶ Issues faced
- ▶ Car Model
 - ▶ Body
 - ▶ Steering Mechanism
 - ▶ Design Model
- ▶ Software
 - ▶ Encoders
 - ▶ Communication

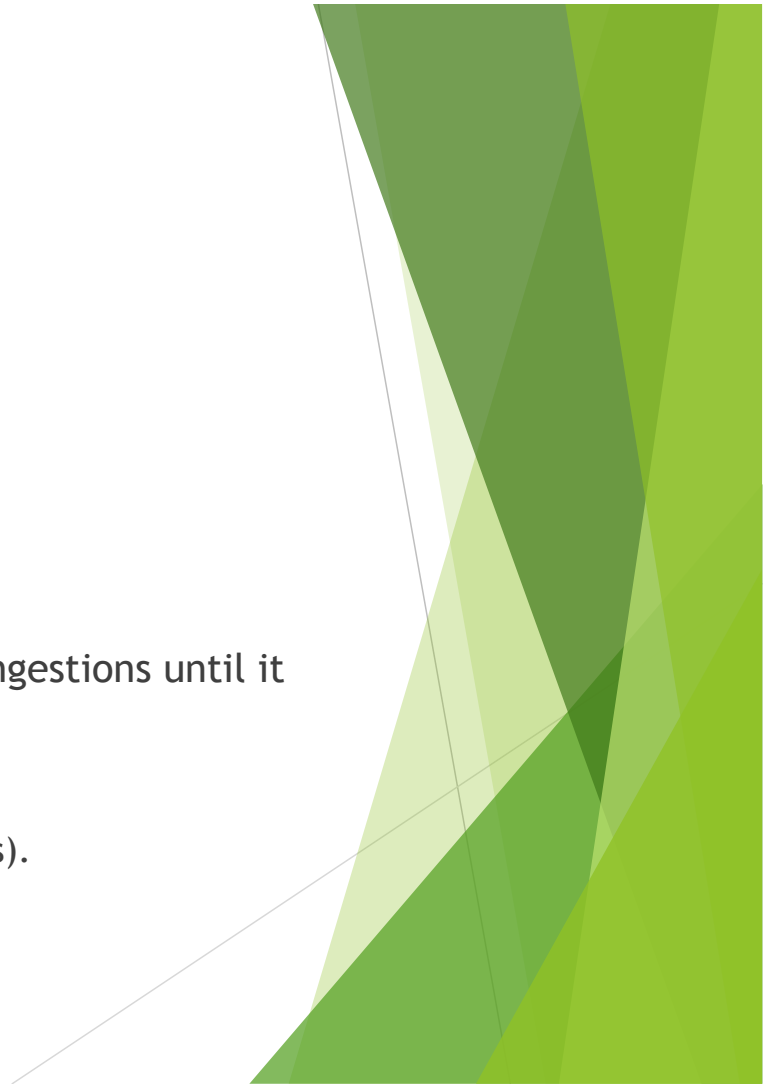

Introduction

- ▶ Main means of transportation emissions:
 - ▶ Cars 61%
 - ▶ Trucks and buses 18%
 - ▶ Reduces QoL
- ▶ Electrical cars solve this problem.

Introduction

- ▶ Available Current solution:
 - ▶ Electric Tram System.
- ▶ Problems with it:
 - ▶ Major work (city planning wise)
 - ▶ Implementation can cause unnecessarily large congestions until it is done.
 - ▶ Costly. Upwards of \$500.000.000 (1.875B S.R)
 - ▶ Half of that cost is to implement foundation (tracks).

Problem Statement

- ▶ a trackless (railway-free) multi-car electric tram.
 - ▶ Efficient to implement in newer cities.
 - ▶ Can go through traffic.
 - ▶ can be electric or fossil fueled.

Impact

▶ Positive:

- ▶ Greatly reduce emission.
- ▶ Reduce cost immensely.
- ▶ Make public transportation more readily available.

▶ Negative:

- ▶ Can cause congestion if not driven properly.

Our Implementation

Design Decisions

- ▶ Communication:

- ▶ XBee.
- ▶ WiFi.
- ▶ Bluetooth.

- ▶ Final Decision:

- ▶ XBee.
 - ▶ Time delay is not a problem in communication.
 - ▶ Familiarity, faster to implement.

Design Decisions

- ▶ Propulsion:
 - ▶ DC Motors.
 - ▶ Stepper motors.
- ▶ Final decision:
 - ▶ DC motor:
 - ▶ Pulse-width modulation for speed.
 - ▶ Speed feedback.

Design Decisions

- ▶ Steering:
 - ▶ DC Motors.
 - ▶ Stepper motors.
- ▶ Final decision:
 - ▶ Stepper motor:
 - ▶ More precision.

Issues Faced

▶ Shipment Error:

- ▶ Missing parts.
- ▶ Late to arrive.
- ▶ handled by pushing back implementation of hardware and focusing on the software.

▶ Front wheel mechanism:

- ▶ We lacked the skills to make one.
- ▶ Handled by: sending Basil on an 80s montage in a journey to figure it out in the FABLAB.

Body

Toys

Market

Steering Mechanism

Differential Drive Mechanism

Ackermann Steering Geometry

Designing Model

$$x = r_{\text{gear}}$$
$$z = r_{\text{wheel}}$$

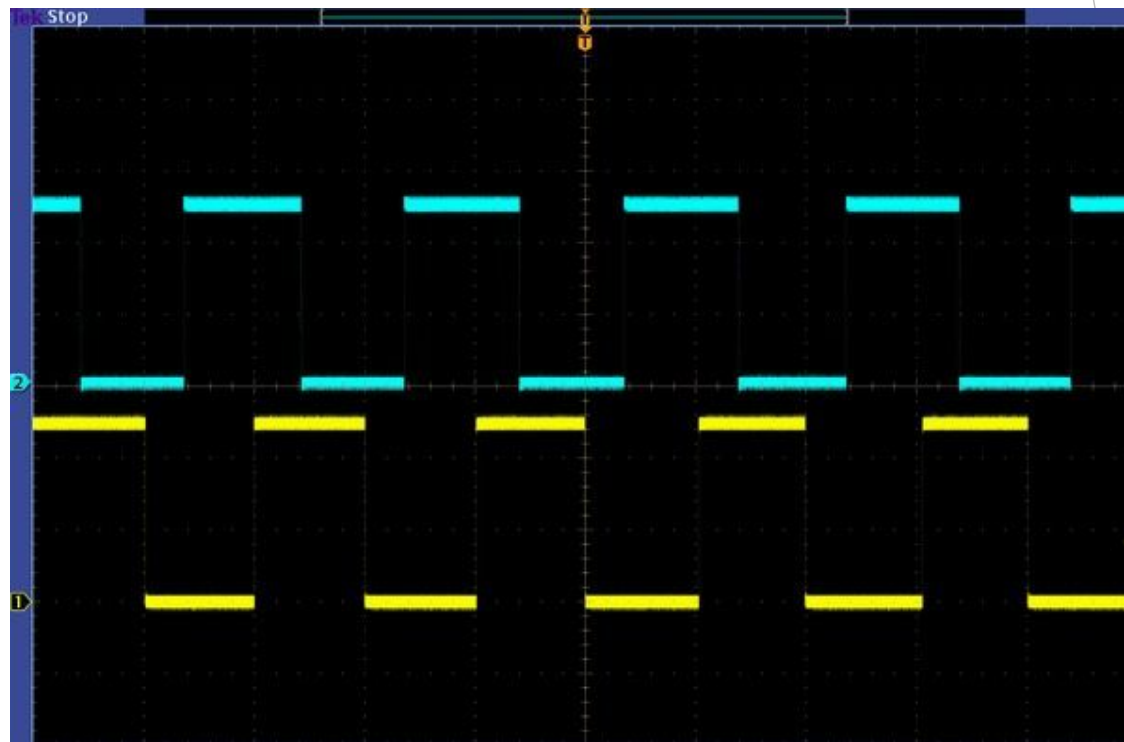

Encoders

Encoders implementation

Encoder signal

Encoders software

issues:

- ▶ frequency "not the same"
- ▶ syncing

```
void loop(){  
while(high){} while(low){}  
//the code }
```

- ▶ **Event Driven Programming**

1. Event checker. current signal state .last signal state.
2. Event Handler. for each case.

Communication

- 4 Xbee
- one for each of the three cars
- one connected to the computer for user input

XCTU - software

XCTU

The screenshot displays the XCTU software interface. On the left, the 'Radio Modules' panel lists two modules: a 'ZigBee Router AT' and a module that 'Could not initialize device'. The main area shows the 'Radio Configuration' for the selected device, including a list of networking parameters such as 'SH Serial Number High', 'SL Serial Number Low', 'MY 16-bit Network Address', and 'DH Destination Address High'. A red error message 'Error in setting' is visible at the top right of the configuration panel.

Radio Modules

- Name:** ZigBee Router AT
Function: ZigBee Router AT
Port: COM4 - 9600/8/N/1/N - AT
MAC: 0013A20040A0D29A
- 1 remote modules**
- Name:** Could not initialize device
Function: Could not initialize device
MAC: 0013A20040A833E3

Radio Configuration [- 0013A20040A0D29A]

Firmware version: 22A7 **Error in setting**

Networking

Addressing
Change addressing settings

SH Serial Number High	13A200	✓
SL Serial Number Low	40A0D29A	✓
MY 16-bit Network Address	B258	✓
DH Destination Address High	FFFF	✓
DL Destination Address Low	FFFF	✓
NI Node Identifier		✓
NH Maximum Hops	1E	✓
BH Broadcast Radius	0	✓
AR Many-to-One Route Broadcast Time	FF x 10 sec	✓
DD Device Type Identifier	30000	✓
NT Node Discovery Backoff	3C x 100 ms	✓
NO Node Discovery Options	3	✓
NP Maximum Number of Transmission Bytes	54	✓

Router car pilot

Router car trailer1

Router car trailer2

Network software

```
#include <XBee.h> //add the xbee library

XBee xbee = XBee();//define a xbee object
void setup(){
  xbee.setSerial(Serial);
  Serial.begin(9600);
  Serial.println("Simple Xbee Communication");
}
void loop()
{
  //some useful methods from XBee.h
  xbee.readpacket(); xbee.getResponse();
  xbee.getDataLength():xbee.isAvaliable();
}
```

Conclusion
